

Exploratory All: Comparing Variables EMMs Across Registers and Sex: 6 Groups (3 Registers x 2 Sexes) | Baseline=0-f | Standardized to 35 clauses

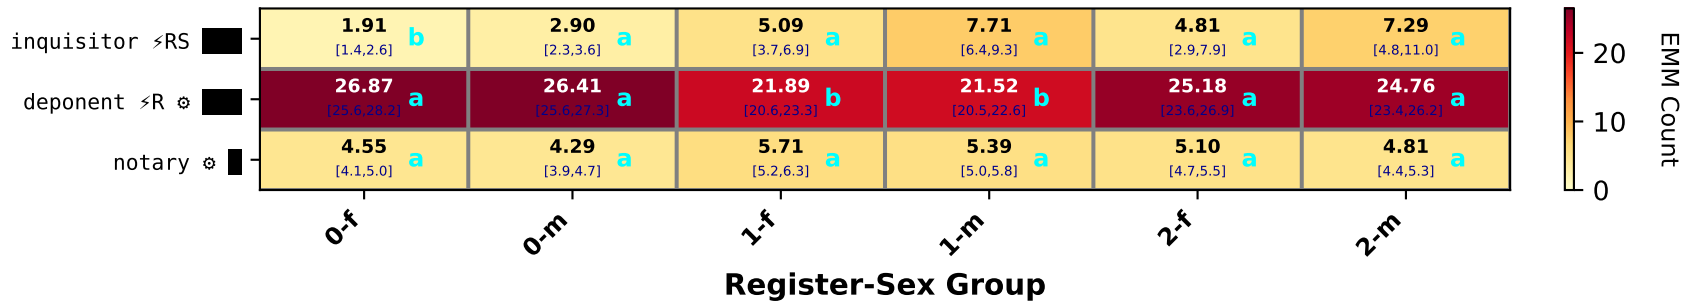

n=801 | r0 n=192 | r1 n=207 | r2 n=402 | f=316 | m=485 | 0-f n=35 | 0-m n=157 | 1-f n=32 | 1-m n=175 | 2-f n=249 | 2-m n=153

Model (baseline=0-f): $\log(E[\text{count}]) = \beta_0 + \sum \beta_{\text{reg}} \cdot I(\text{reg}=i) + \beta_{\text{sex}} \cdot I(\text{sex}=m) + \text{LENGTH}$ where [O] LENGTH=offset(log(len)), [L] LENGTH= $\beta_{\text{len}} \cdot \log(\text{len})$, [L+] LENGTH= $\beta_{\text{len}} \cdot \log(\text{len}) + \sum \beta_{\text{len} \times \text{reg}} \cdot \log(\text{len}) \cdot I(\text{reg}=i) + \beta_{\text{len} \times \text{sex}} \cdot \log(\text{len}) \cdot I(\text{sex}=m)$

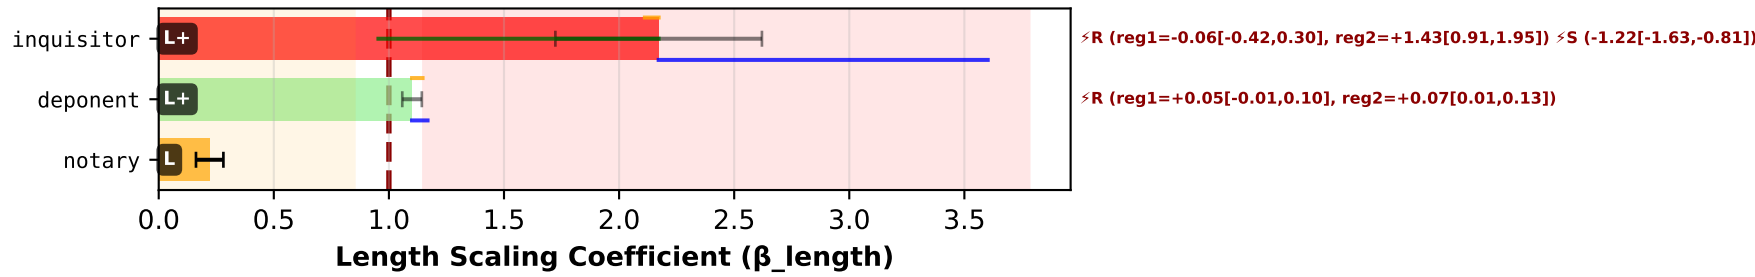

Panel 1: Estimated Marginal Means (HC3 Robust)
with 95% CIs & CLD (FDR-corrected)

↗R/S = Sig.Int | ↓ = Fallback | !ZI = Zero-Inf | ⚡ = HC3 SE

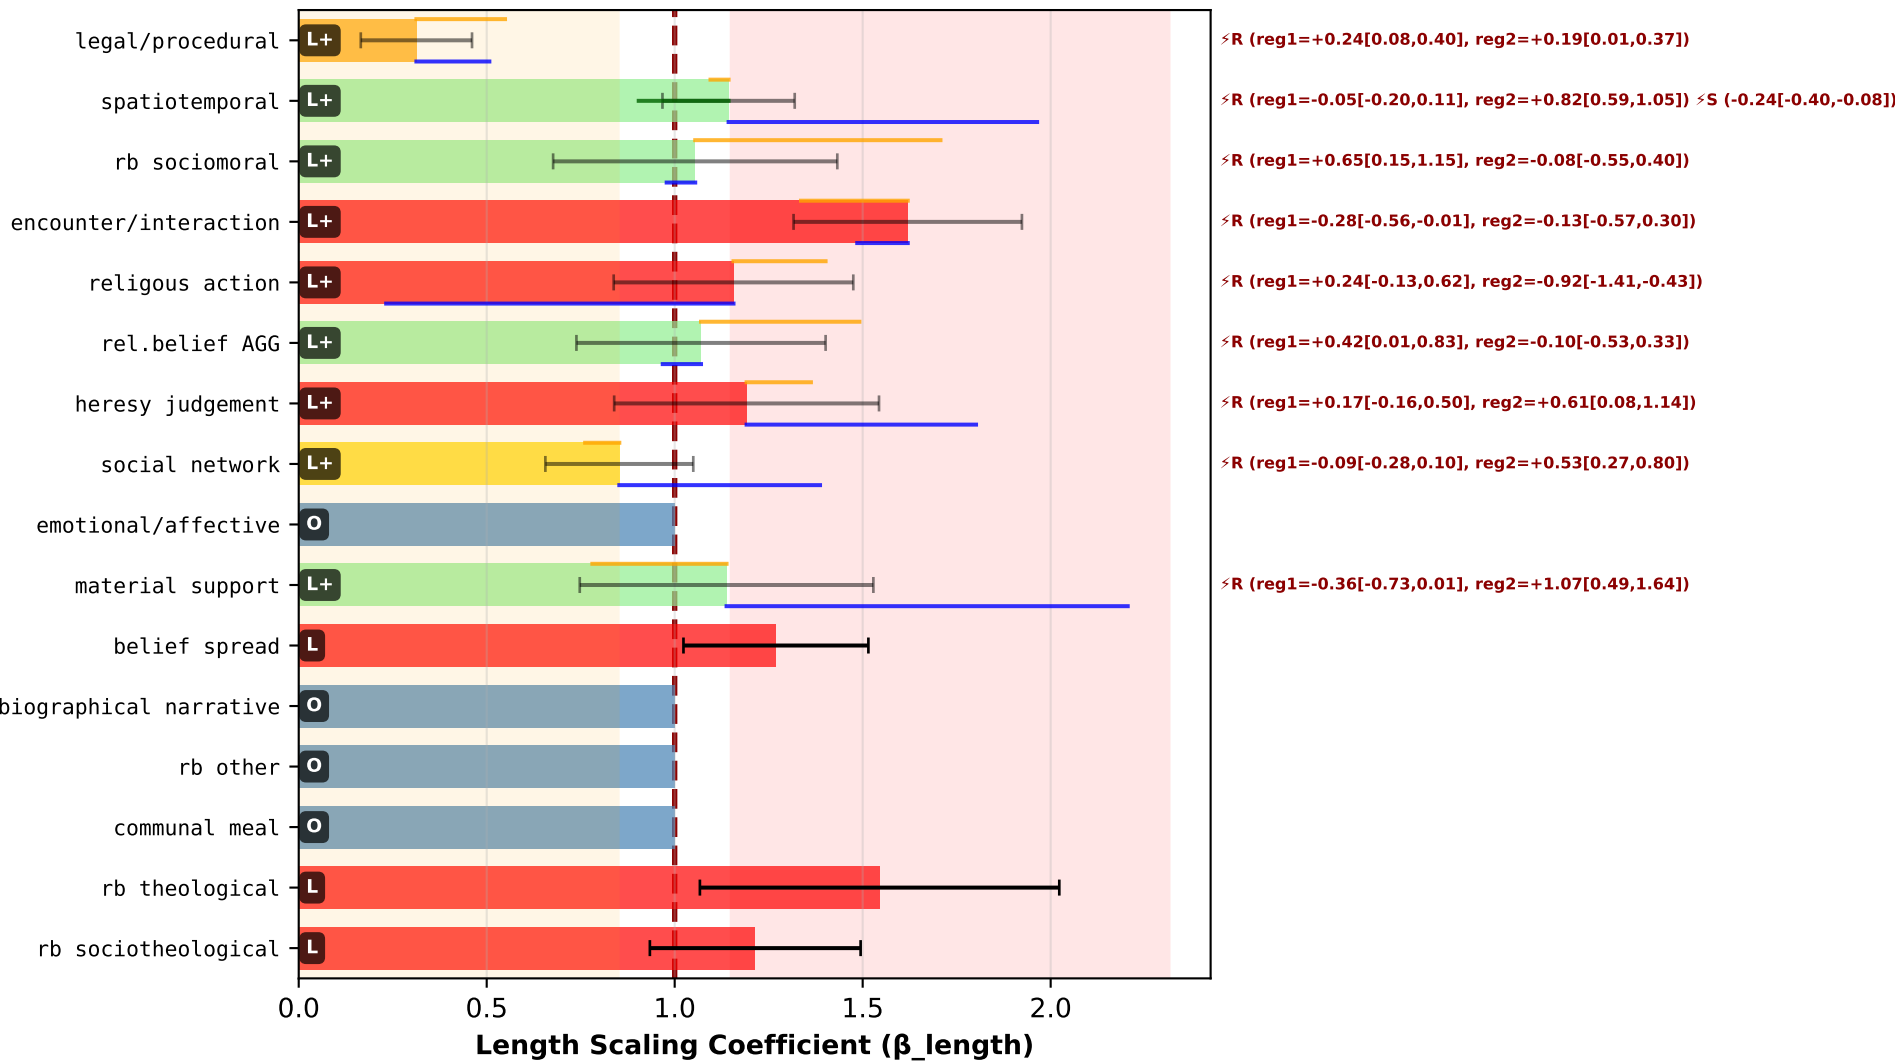

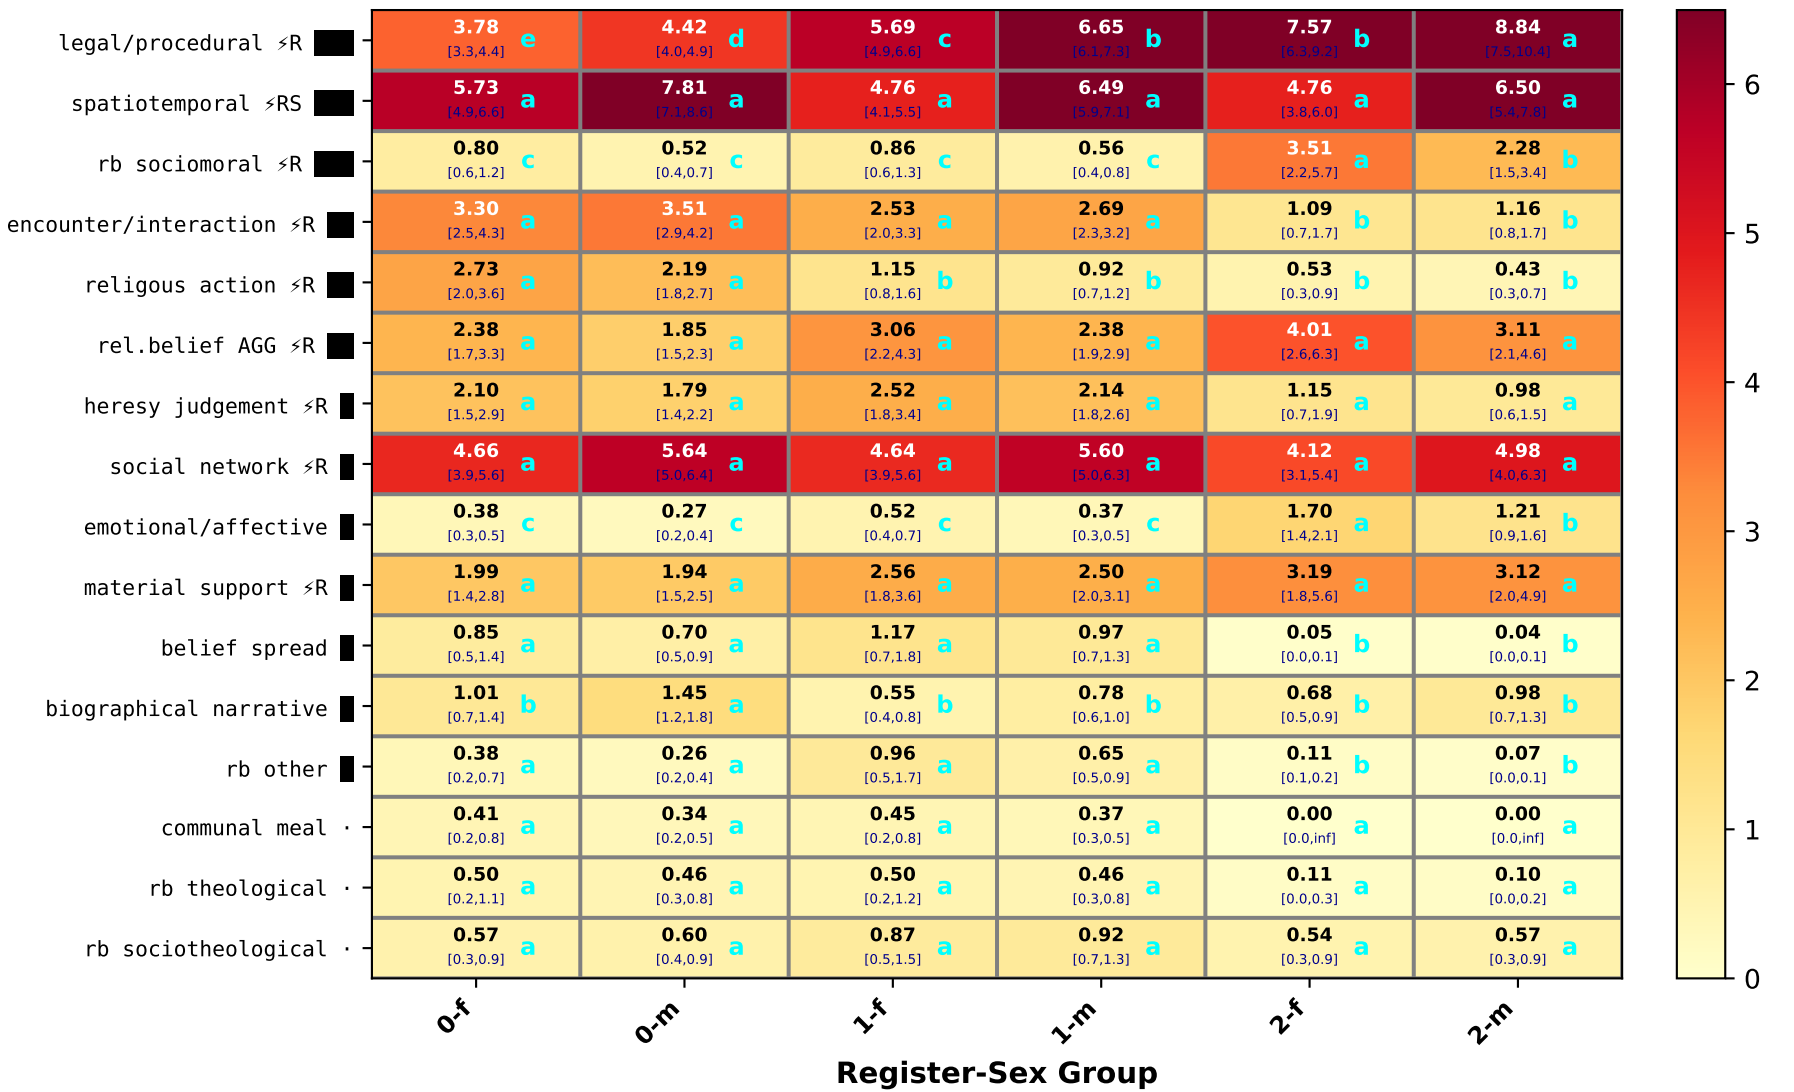

— Narrative Agency —

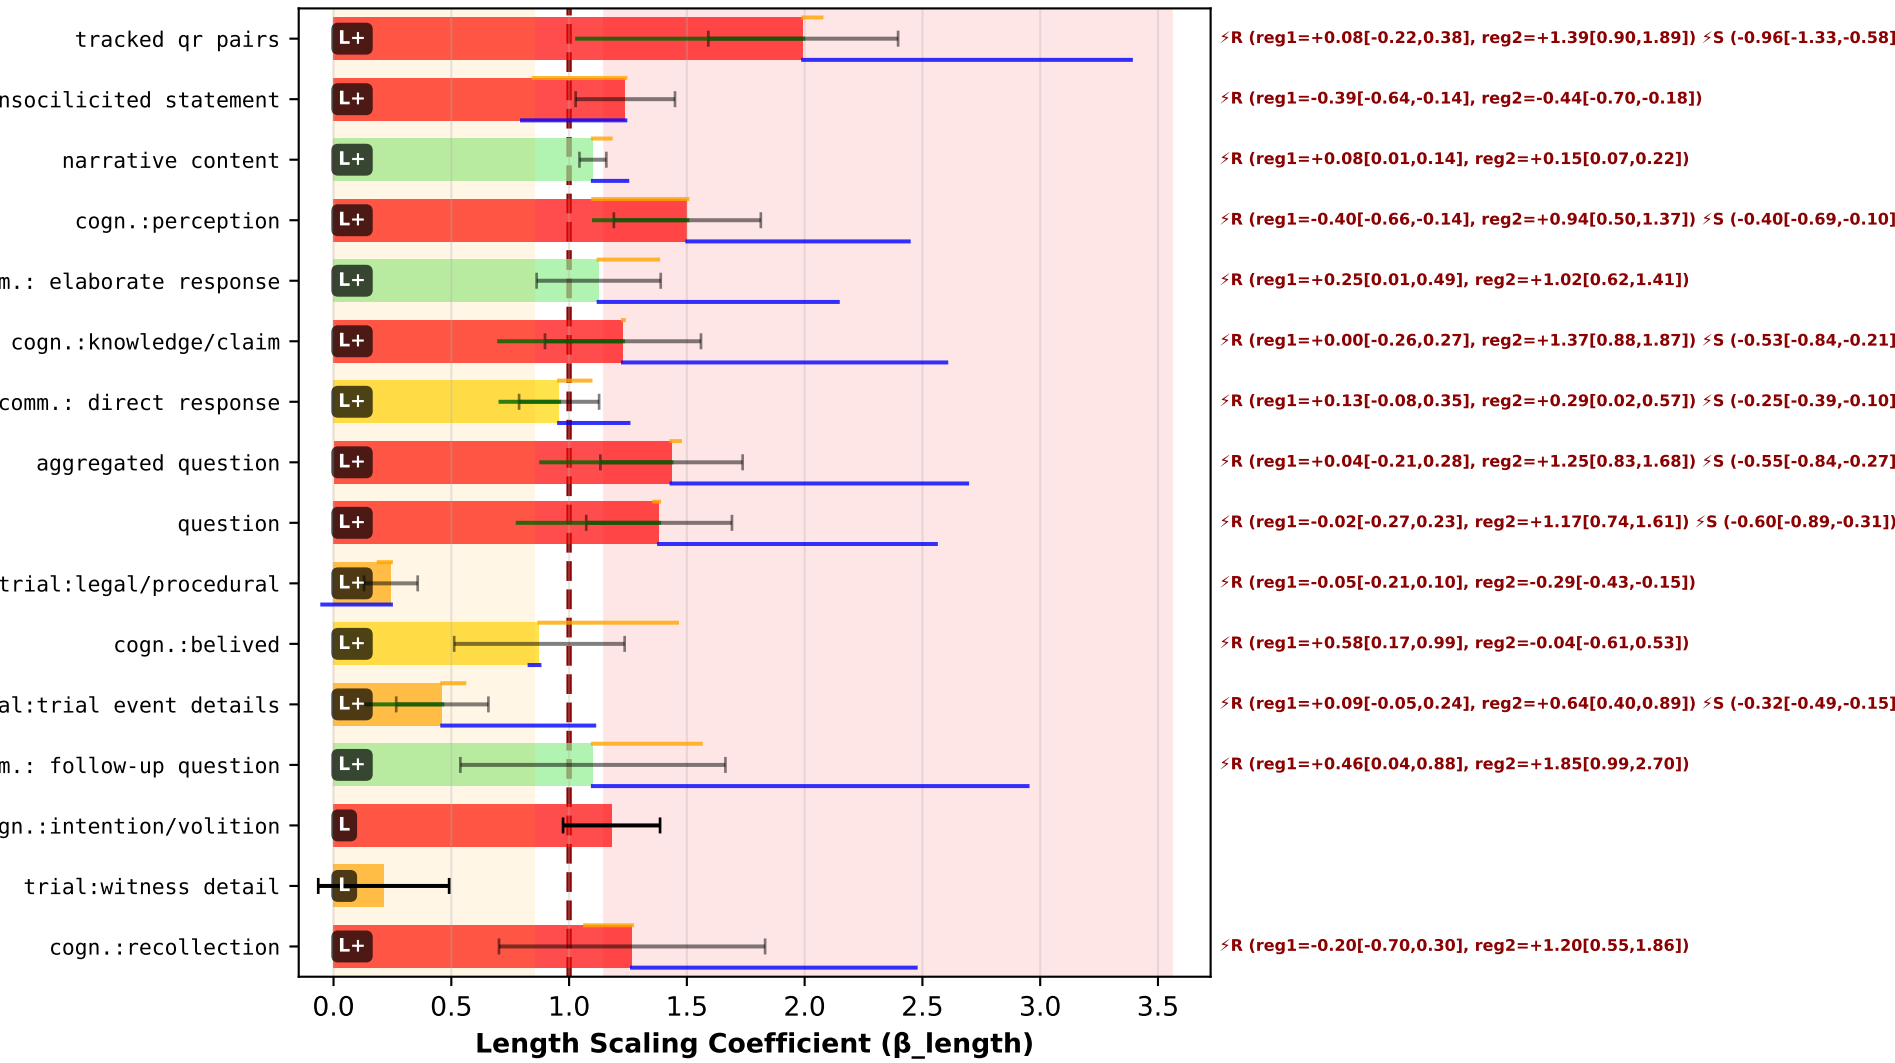

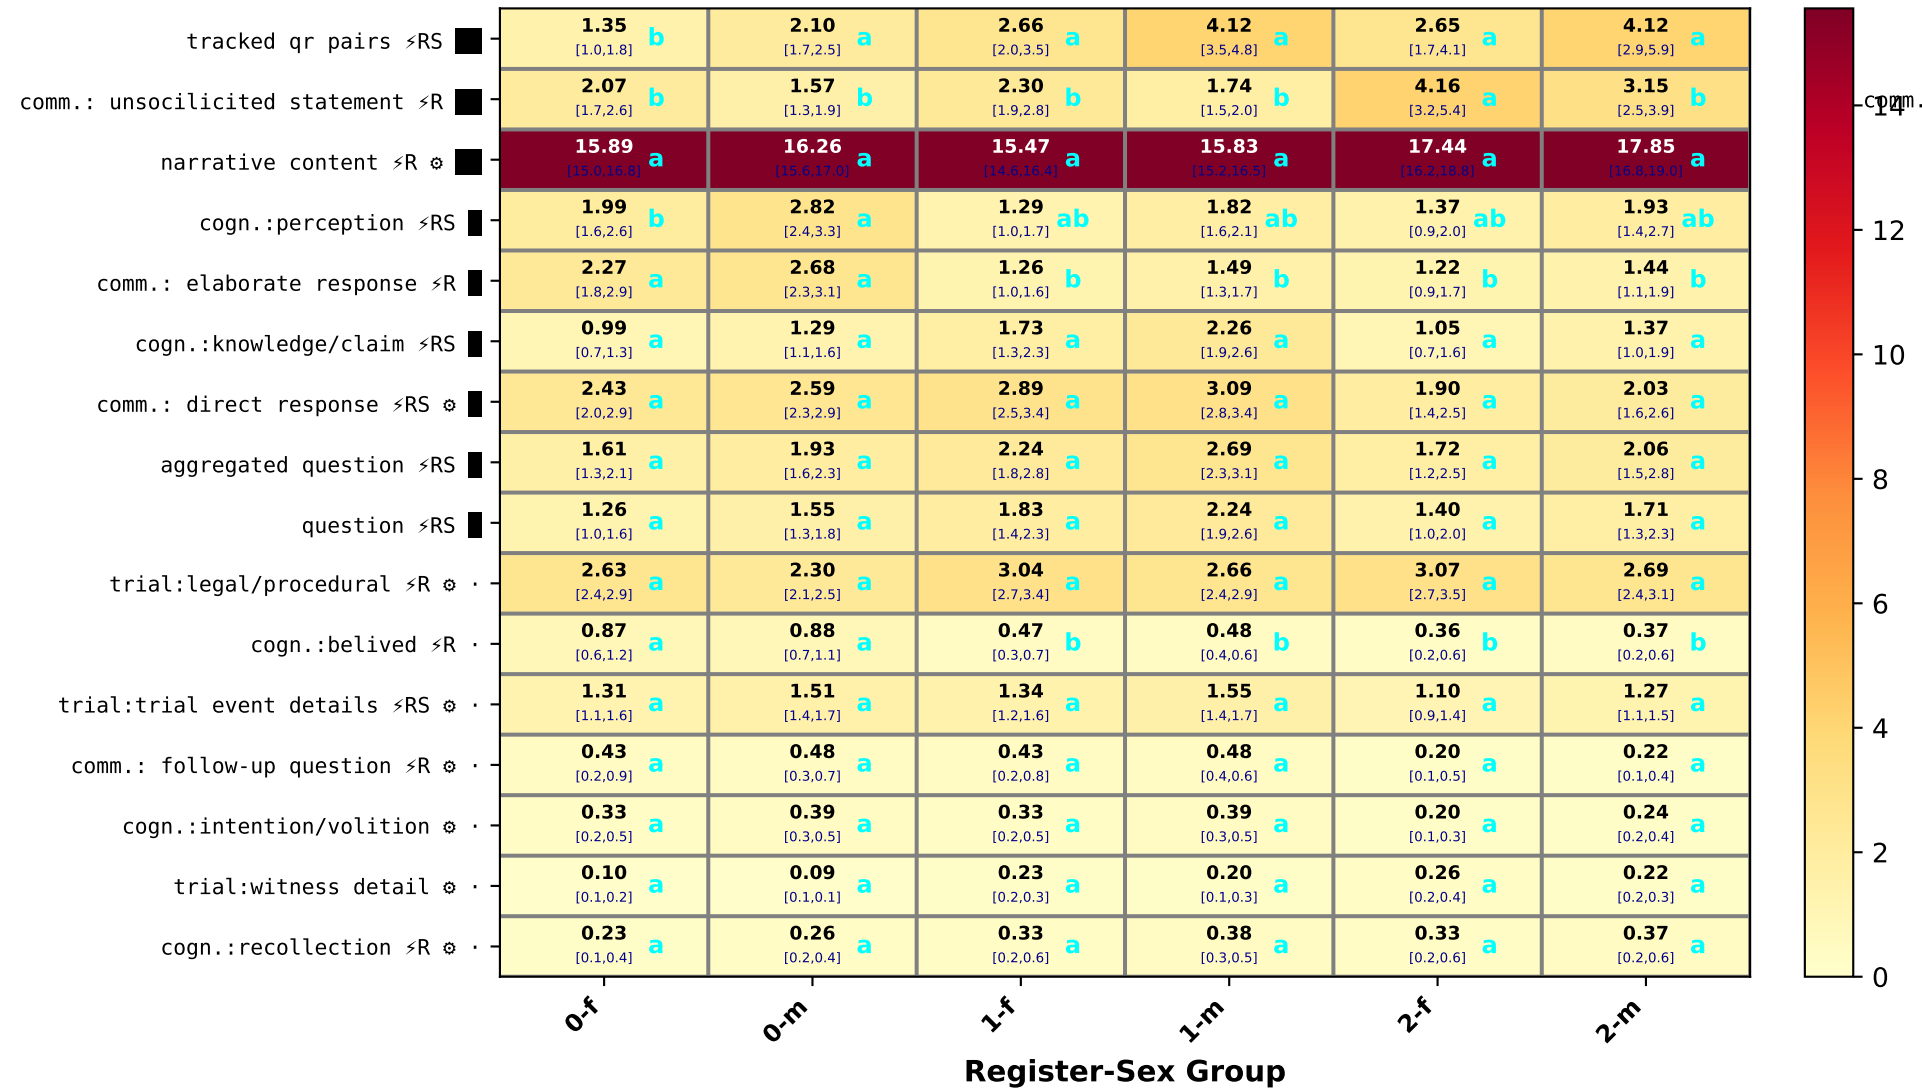

Panel 2: Length-Content Relationship (bar=baseline 0-f, black=95% CI)
Interaction lines: Orange=reg1 | Blue=reg2 | Green=sex | ↗R/S=coeffs+Cls (right)
